

SUSTAINABILITY

We believe that sustainability is a comprehensive responsibility for economic, ecological and social action. Our aim is not only to organise outstanding events, but also to make our contribution to preserving our living environment.

Hospitality

We use environmentally friendly packaging, such as reusable containers, and use reusable tableware, cutlery and glasses to fulfil our ecological responsibility.

Catering

We provide our guests with carafes of tap water and ensure that they are constantly filled with fresh water. We also take care of the timely removal and cleaning of the glass carafes.

Building/energy consumption

In all meeting and conference rooms, we keep the room temperature at a maximum of 20°C, with cooling no more than 6 degrees below the outside temperature. In addition, we use daylight wherever possible, optimised lighting control and efficient sun protection to save energy and improve room comfort.

Devices

We use dishwashers with maximum energy efficiency. When selecting IT equipment, printers and multifunctional devices, we choose products that have a lower impact on the environment.

Kitchen waste

We collect kitchen waste and used cooking oil separately to ensure environmentally friendly processing.

Waste separation

We have set up waste banks that enable separate collection for paper, organic waste, glass, lightweight packaging and metal. We also minimise packaging waste by using reusable containers and requiring our suppliers to take back packaging. We order in bulk and use recycled cardboard for cardboard packaging to reduce our environmental impact.

Product selection

We prefer organic and fair trade products, such as coffee, tea and juices. We prioritise the use of food that is available in season and has been transported in an environmentally friendly way. We purposely avoid fish and fish products from endangered stocks in our catering and instead use certified products to ensure that we offer sustainable options.

Cleaning products

We use cleaning products extremely sparingly and consistently avoid environmentally harmful variants.

Water consumption

We place signs about water-saving devices to raise awareness of participants and make them aware of the need to conserve resources.

Since July 2023, we have been certified with the internationally recognised sustainability certificate GreenSign and fulfil the most important criteria in harmony with ecological standards, social commitment and economic success.
